DENTAL CAD/CAM TECHNOLOGY

BETTER FITTING, MORE DURABLE.

The fabrication of all-ceramic, esthetic, and durable anterior crowns and bridges is made possible through the combination of new technology and new materials. The new technology is **CAD/CAM**, computer aided design/computer aided manufacturing. It fabricates an all-ceramic (Zirconia) framework that is not only very thin, light, and durable, but also available in various tooth color shades that improves the life-like esthetics of the final restoration.

STERILIZATION GUARANTEED

We have very strict infection control system designed to prevent cross-infection between patients. All of our dental instruments including our handpieces are sterilized to 135 degree Celsius using a vaporizing effect created from high pressure spraying heat thoroughly through every part of the instrument, even a very tiny spaces.

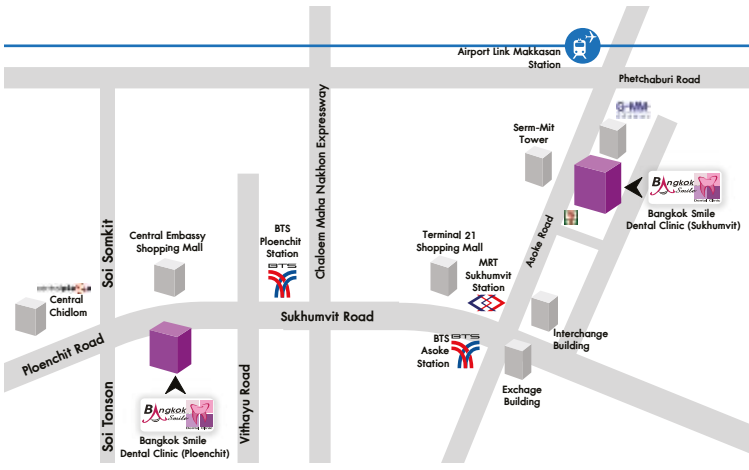

We, one of the very few dental clinics in Thailand, have the in-house "ISO 9001 certified"

dental laboratory. We have our own porcelain oven processing units so nothing has to be sent out thus delaying your treatment. Our in-house dental lab combines hi-tech equipment with experienced dental technicians, to guarantee that all dental works are made to exact specifications.

OUR DENTISTS

Our dentists are highly trained in various specialized fields of dentistry with their wide experience from the finest Thai and overseas universities. They speak English fluently so the language barrier can be overcome. We are committed to providing you and your family with every aspect of dental care while ensuring that you are comfortable and satisfied with our dental service.

- Performed by a Dentist

DENTAL VENEERS

The ultra-thin custom-made shell of tooth colored materials designed to cover the front surface of each tooth.

TOOTH COLORED RESTORATION

If you do not like the appearance of dark fillings or gray lines when you smile, or have a sensitivity to metals, metal free restorations are the solution. All ceramic/porcelain, metal free, materials are translucent and allow light to penetrate and reflect from within the restoration. Due to the strength in the modified ceramic/porcelain, our crowns/bridges/inlays are suitable for prosthetic reconstructions anywhere in your mouth.

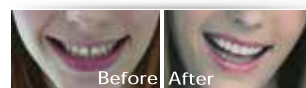

DENTAL CROWN & BRIDGE

Crowns are needed when a large amount of tooth structure has been damaged. They are made of full porcelain and cover the entire tooth surface. With the advances in materials and techniques, they can give you the strength for natural tooth. **Bridges** replace a missing tooth by "bridging" over the open space. A bridge consists of two or more crowns on natural teeth that are attached to an artificial tooth called a pontic, replacing the missing tooth. Fixed bridges are a great way to restore your dental health and appearance.

Testimonial of cosmetic dental treatments

I came to Bangkok not knowing anything about the country & having ugly crooked teeth. I am leaving with beautiful bright straight teeth & many Thai friends. The staff at "Bangkok Smile Dental Clinic" are all very helpful & friendly & went way beyond the expected customer service! I would recommend anyone & everyone to have their dental work done here! the dentists are very good & friendly and speak fluent English once again.

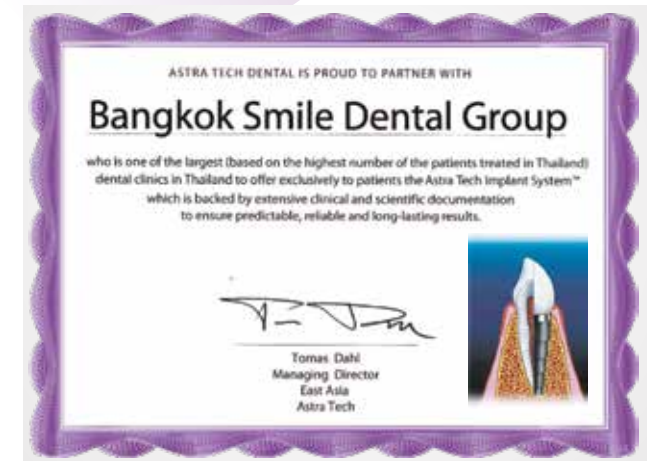

Thank You!
